Does sexual activity change with age?

February 4, 2014

By Markus Gesmann

[Read more »](#)

Recently the Guardian's Data Blog reported about the results from the third National Survey of Sexual Attitudes and Lifestyles in the UK. One of the questions asked in the survey was if the participants had sex in the last four weeks. The results - a ...

2. [Installing R packages](#)
3. [Using apply, sapply, lapply in R](#)

The top 10 packages out of 10,000 (January 2017)

Hmisc: This was one of the first R packages to be used at eoda on a regular basis. Today we barely use Hmisc anymore but nonetheless it had to be part of our top 10 simply for nostalgic reasons.

data.table: R as an in-memory database with data.table? Who said R was slow?

TraceR: Excellent profiling package. Will find every bottleneck.

dplyr: Not only fast when it comes to evaluation but also easy to master. Intuitive data management with R has a name – dplyR.

ggplot2: A guarantee for easily creating descriptive graphics.

magrittr: `%>%`. The pipe operator `%>%` turns complicated nested function calls into readable chains.

shiny: Interactive web application where programming in HTML and JavaScript can be done with little effort.

tidyr: Very good functionality for restructuring data. Particularly remarkable: the functions `gather` and `spread` for converting data from long to wide format or from wide to long format.

caret: This package unifies the data mining algorithms in one interface.

Rcpp: A package that we don't use extensively ourselves but is nevertheless indispensable in our top 10 list because it is an important component of many other great R packages.

And finally, be alert to poor design.

And finally, be alert to poor design.

No one saw the anomaly.

Dedication

This report is dedicated to the 11 men who lost their lives on the *Deepwater Horizon* rig on April 20, 2010 and to their families, in hope that this report will help minimize the chance of another such disaster ever happening again.
