Basic elements of file management

ME 447/547 Visualizing Data

Richard Layton

January 2019

Rose-Hulman Institute of Technology

Effective file management begins when the project begins

carpentry
data
data-raw

Plan your directory
structure
figures
reports
README.Rmd
portfolio.Rproj

Plan a file-naming scheme

Use relative file paths to link files

Planning the structure

The portfolio project has a mandatory structure

- **arpentry**
- data
- data-raw
- design |
- explore
- **figures**
- manage
- reports
- resources
- ___ .gitignore
- Renviron
- README.Rmd
- 🕦 portfolio.Rproj

Open portfolio.Rproj to start every work session

- **arpentry**
- data 🚞
- data-raw
- design design
- explore
- figures
- **manage**
- reports
- resources
- ___ .gitignore
- Renviron
- README.Rmd
- portfolio.Rproj Sets the project directory as the working directory

README introduces your portfolio to the reader

- carpentry
- data
- data-raw
- design
- explore
- figures
- manage
- reports
- resources
- gitignore .
- Renviron
- 🔋 portfolio.Rproj

Other top-level files perform administrative duties

- carpentry data
- data-raw
- design
- explore
- figures
- manage
- reports
- resources

□ Directs Git to ignore specific files

Renviron

- Stores packages in a library separate from base R
- README.Rmd
- 😮 portfolio.Rproj

Raw data are never edited manually

- carpentry
- data
- data-raw
 - □ Data in its original form

- 🚞 design
- explore
- figures
- manage
- reports
- resources
- gitignore ...
- Renviron
- README.Rmd
- R portfolio.Rproj

Explore data structure before tidying

- **arpentry**
- ata data
- data-raw
- design
- explore
- figures
- manage
- reports
- resources
- _____.gitignore
- Renviron
- README.Rmd
- 🗷 portfolio.Rproj

□ Data in its original form

□ R scripts for exploring data and potential graphs

Data carpentry converts raw data to tidy data

- **arpentry**
- R scripts that turn raw data into tidy data

- data
- data-raw

□ Data in its original form

- design 🚞
- explore
- figures
- manage
- reports
- resources
- gitignore ...
- .Renviron
- README.Rmd
- 🕦 portfolio.Rproj

Data carpentry converts raw data to tidy data

- **arpentry**
- □ R scripts that turn raw data into tidy data

data 🗀

◄ Tidy data saved here, read by design scripts

- data-raw
- **design**
- explore
- **figures**
- manage
- reports
- resources
- gitignore .
- .Renviron
- README.Rmd
- 🕦 portfolio.Rproj

Graph design converts to tidy data to graphs

- **arpentry**
- data-raw
- explore
- figures
- manage
- reports
- resources
- gitignore ...
- Renviron
- README.Rmd
- 🕦 portfolio.Rproj

Graph design converts to tidy data to graphs

- carpentry
- data 🚞
- data-raw
- design

□ R scripts that create and save graphs
 □

- explore
- figures

Graphs saved here, imported by report scripts

- manage
- reports
- resources
- gitignore .
- Renviron
- README.Rmd
- 🕦 portfolio.Rproj

Reports commingle data, scripts, graphs, prose, and references

- **arpentry**
- data
- data-raw
- **design**
- explore
- figures

Graphs saved here, imported by report scripts

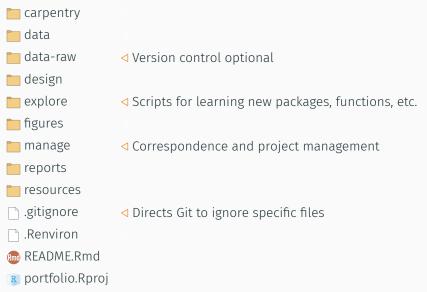

- manage
- reports , graphs and resources
- resources resources

- gitignore .
- .Renviron
- README.Rmd
- 🕦 portfolio.Rproj

README creates the main page of your portfolio website

carpentry data data-raw design explore figures manage reports Reports draw from data, graphs and resources resources .gitignore .Renviron README.Rmd Provides explicit links to every report 🔞 portfolio.Rproj

Reduce clutter by excusing some resources from version control

Summary: Use the given directory structure for the portfolio

carpentry R scripts that create and save tidy data data ☐ Tidy data saved here, read by design scripts data-raw □ Data in its original form (version control optional) design explore R scripts for exploration and learning new skills Graphs saved here, imported by report scripts figures manage Correspondence and project management reports One report per display type resources .gitignore □ Directs Git to ignore specific files .Renviron Stores packages in a library separate from base R README.Rmd Creates the main page of your portfolio website R portfolio.Rproj ✓ Sets the project directory as the working directory

Naming files

PROTIP: NEVER LOOK IN SOMEONE. ELSE'S DOCUMENTS FOLDER.

Source: https://xkcd.com/1459/

Three basic principles should guide your choice of filenames

Filenames should be machine readable

- use delimiters "_" and "-" instead of spaces
- avoid symbols, punctuation marks, and case-sensitivity

Filenames should be human readable

- include information about the file content

Filenames should be friendly to default ordering

- start filenames with a numeric ID
- use leading zeros, e.g., 001, 002, ..., 999

A sample set of portfolio file names illustrates the principles

Numeric display ID starts every file name: d1, d2, ..., d7 Hyphenated content-information supports human readability All lowercase, no special symbols, no spaces

```
explore/ d1-strip-plot-speedski-explore.R carpentry/ d1-strip-plot-speedski-data.R data/ d1-strip-plot-speedski-data.rds design/ d1-strip-plot-speedski.R figures/ d1-strip-plot-speedski.png reports/ d1-strip-plot-speedski.Rmd
```

Add a sequence number 01, 02, etc., for related files

Sequential numbers indicate the order in which related files are run.

For version control, use git, not sequential file numbers.

With a plan for managing files, we can start writing them

- **arpentry**
- data
- data-raw
- design
- **explore**
- **figures**
- manage
- reports
- resources

- d1-strip-plot-speedski-data.R
- d1-strip-plot-speedski-data.rds
- a d1-strip-plot-speedski-data-raw.csv
- R d1-strip-plot-speedski.R
- R d1-strip-plot-speedski-explore.R
- d1-stripplot-speedski.Rmd
- d1-stripplot-NIST-ref.pdf

Linking files

Explicitly linking files supports reproducibility

Remove all ambiguity about what files are used to create a report

portfolio.Rproj sets the working directory and supports relative file paths

Relative file paths document the data tidying workflow

Write an R script for data tidying

carpentry/d1-strip-plot-speedski-data.R

that reads the raw data, prepares it for graphing,

read_csv("data-raw/d1-strip-plot-speedski-data-raw.csv")

and writes the tidy data frame to the data directory.

saveRDS(mydata, "data/d1-strip-plot-speedski-data.rds")

Relative file paths document the graph design workflow

Write an R script for graph design

design/d1-strip-plot-speedski.R

that reads the tidy data, creates the graph,

R readRDS("d1-strip-plot-speedski-data.rds")

and writes the image to the figures directory.

ggsave("figures/d1-strip-plot-speedski.png")

The report script runs all the files in order

Write an Rmd report script containing the report text

reports/d1-stripplot-speedski.Rmd

interleaved with Rmd code chunks that run every R script,

- source("carpentry/d1-strip-plot-speedski-data.R")
- source("design/d1-strip-plot-speedski.R")

import data to print a data table,

readRDS("data/d1-strip-plot-speedski-data.rds")

and import figures.

include_graphics("figures/d1-strip-plot-speedski.png")

The README script includes links to each report

creates the portfolio main webpage

Displays and critiques

Your prose as needed.

[D1 Title](reports/d1-strip-plot-speedski.md)

[D2 Title](reports/d2_report.md)

[D3 Title](reports/d3_report.md)

[D4 Title](reports/d4_report.md)

[D5 Title](reports/d5_report.md)

[D6 Title](reports/d6_report.md)

[D7 Title](reports/d7_report.md)

Portfolio of data display

Your name 2018-12-04
